Airguns are becoming increasingly popular for target shooting, hunting, and pest control. As the popularity of airguns grows, so does the demand for accurate and consistent ammunition.

One of the most important factors in airgun accuracy is the quality of the pellets. Pellets that are not properly sized, shaped, or weighted can cause significant accuracy problems.

One way to improve accuracy is to sort pellets by size, shape, and weight. This can be done using a pellet sorter, or by hand.

Benefits of Sorting Pellets

There are several benefits to sorting pellets for airguns. These benefits include:

- Improved accuracy
- Reduced flyers
- Increased consistency
- Longer barrel life

How to Sort Pellets

There are two main methods for sorting pellets: using a pellet sorter or sorting by hand.

Using a Pellet Sorter

Pellet sorters are available in a variety of sizes and shapes. Some pellet sorters are designed to sort pellets by size only, while others can sort pellets by size, shape, and weight.

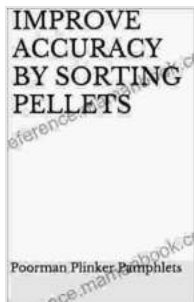

To use a pellet sorter, simply pour the pellets into the hopper and turn on the machine. The pellet sorter will then automatically sort the pellets into different bins based on their size, shape, or weight.

Sorting by Hand

If you do not have a pellet sorter, you can also sort pellets by hand. To do this, you will need a set of calipers and a scale.

To sort pellets by hand, first measure the diameter of each pellet using the calipers. Then, weigh each pellet using the scale. Once you have measured and weighed all of the pellets, you can sort them into different bins based on their size and weight.

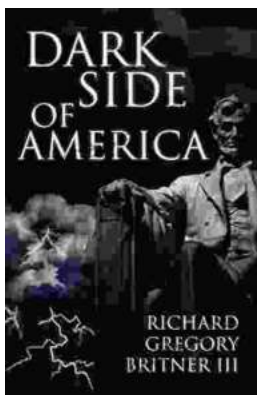

Sorting pellets can be a time-consuming process, but it can significantly improve the accuracy of your airgun. If you are serious about improving your airgun accuracy, then I recommend that you start sorting your pellets.
